

CYBER RESILIENCE PLATFORM

SECURE BY EVIDENCE

SYSTEM PRESENTATION / CONFIDENTIAL DRAFT

AA-sec: System Presentation

Automate CRA compliance. Keep control. Prove every step.

CONTEXT

What is the CRA — and why now?

The **Cyber Resilience Act** is an EU regulation for products with digital elements. It turns cybersecurity requirements into product lifecycle obligations — binding, operational, and time-bound.

What it means

Mandatory security requirements across the full product lifecycle — from design to post-market monitoring.

Article 14 obligations

- Report actively exploited vulnerabilities
- Severe security incidents
- 24h early warning
- 72h notification
- Final report for severe incidents

Regulation (EU) 2024/2847

CRA is not only about documentation. It becomes an ongoing operational process.

PROBLEM

Evidence should not live in spreadsheets.

The operational reality

- Evidence is distributed across existing tools
- Product-security status is hard to prove quickly
- Release documentation is often prepared manually
- Post-market monitoring creates continuous workload
- Article 14 adds time-bound reporting pressure

📄 **~€63k-65k gross/year***
One in-house security specialist in Austria,
before overhead and tooling.

Hiring people helps. Manual compliance still does not scale.

SOLUTION

AA-sec turns CRA requirements into a managed lifecycle

One structured workflow across product, release, vulnerability, evidence and documentation state.

Instead of building your own compliance platform, your team works in one guided system from current state to audit-ready output.

CAPABILITIES

What AA-sec does for your team

Four capability areas designed for the teams who own compliance outcomes.

KNOW

See the current CRA compliance state of each product at any moment — without chasing status updates.

PROVE

Keep evidence connected to requirements, products and releases. Every claim is traceable.

MONITOR

Track SBOMs, vulnerabilities and relevant post-release changes continuously and automatically.

DELIVER

Generate consistent documents and dossiers directly from live platform data — not from spreadsheets.

Less manual coordination. More reusable compliance evidence.

WHO WE ARE

Built for Engineering and quality-led delivery

Anton C.

QA Lead
Process Automation
MCP Professional

Anton V.

Safety-critical systems architect
Cybersecurity specialist
Embedded engineer

Why trust us: Critical-safety engineering discipline.
QA-grade repeatability. Evidence by design.
Built by practitioners, for practitioners.

GETTING STARTED

Just Start. Without a transformation project.

Four steps from sign-up to a running CRA lifecycle — no re-platforming required.

AA-sec adapts to your operating model — not the other way around.
Existing tools and evidence sources are integrated, not replaced.

 We help with setup, first integrations and the initial compliance workflow — so your team is productive from day one.

INTEGRATIONS & AUTOMATION

Connect Your Toolchain. Automate the Workflow.

Bring compliance into the tools and processes your teams already use — through standard integrations, APIs, and custom connections.

Standard Integrations

Connect common engineering and security tools to exchange relevant product and compliance data.

API Access

Automate platform capabilities directly from existing workflows and systems.

Custom Integrations

Extend connectivity for organization-specific tools and processes.

Workflow Automation

Reduce manual handovers by moving data and actions between AA-sec and the surrounding toolchain.

DEPLOYMENT

Your platform. Your level of control.

AA-sec offers flexible deployment options designed to meet varying customer requirements for control, compliance, and infrastructure isolation.

Hosted by AA-sec

This is our primary offering, with AA-sec managing:

- Hosting
- Deployment
- Updates
- Operations

Hosted in the EU to support EU data residency requirements.

Dedicated for You

A separate, dedicated customer environment for enhanced isolation and control.

Suitable for organisations with stringent procurement or security policies requiring greater infrastructural separation from multi-tenant environments.

In Your Environment

AA-sec is deployed and run directly on the client's own infrastructure.

This option is tailored to your specific needs for maximum operational control and integration within existing IT ecosystems.

No product limits.

Regardless of the chosen deployment method, the core evidence model, workflows, and audit semantics of AA-sec remain consistent and uncompromised.

DEPLOYMENT

Your Environment. Our Platform. Delivered Together.

For organisations with stringent infrastructure control and data residency requirements, AA-sec offers a robust on-premise deployment package.

Deploy in Your Environment

AA-sec can be packaged for installation within your customer-controlled infrastructure, providing complete ownership of the deployment and your data.

Use Your Systems

We can integrate with your existing identity provider, storage solutions, security tooling, and internal operational processes.

Start with Us

Our team provides expert guidance to configure, connect, validate, and onboard your initial compliance workflows for a seamless launch.

Goal: Make AA-sec fit your operating model — not force your teams to rebuild it.

PRICING

Simple pricing. Predictable start.

Starter Package

€490 / mo

Billed annually — or **€590 / month** on a monthly basis.

- 1 organisation, unlimited users
- 1 product included
- All platform features*
- Standard connectors

Additional product: +€290 / month per product

Volume discounts available from 6 products by contract override.

* Fair-use safeguards apply only to protect service health and prevent abuse.

Optional Services

We onboard your products for you	€3,900 / one time fee
Team Training	from €500 / expert session
"Fire alarm" Team checks	€2,900 / one time fee
Custom integrations	Time & material
On-premise	from €12,000 / year

✓ For the first 10 customers: **onboarding included** for annual contracts.

All prices excl. applicable VAT.

CYBER RESILIENCE PLATFORM

SECURE BY EVIDENCE

Know where you stand.

Prove what you did.

React when it matters.

Let's make CRA operational.
